# COMPANY INTRODUCTION

Zhejiang ETEK Electrical Technology Co., Ltd. (Abbreviation: ETEK Electric) is a professional manufacturing company dedicated to the research, development, production, and sales of low-voltage electrical appliances. The company was established in 2011 and is located in Wenzhou City, Zhejiang Province. At present, the company has 40K sqm of modern manufacturing bases in Wenzhou and Wuhu with over 500 employees, including over 50 R&D and technical personnel. ETEK Electric has multiple production workshops for mold design, parts manufacturing, welding, and assembly. Additionally, they have multiple automated production lines for MCB and RCCB. Our products include MCB, RCCB, RCBO, AFDD, MCCB, ACB, EV Chargers, Photovoltaic DC products, etc., which can meet the needs of different countries and are widely used in fields such as residential, commercial, and industrial.

Beginning in 2018, ETEK Electric began to invest heavily in the research and development of new energy products. After more than two years of unremitting efforts, the new sub-brand "ETEC" EV Charger products were officially put into production. protection, safety and reliability; humanized design, convenient operation; excellent applicability, simple installation, economical and practical. At the same time, combined with the continuous improvement of the international and domestic markets, especially the European Union's charging standards for new energy electric vehicles, combined with the requirements of the IEC61851 standard, the company independently developed the latest generation of controllers. The product has a DLB current balance working mode, real-time monitoring of the main circuit current, and automatic adjustment of output charging current, effectively protecting the electricity safety of the main current circuit. The company has also researched and developed the controller system of OCPP2.0 communication protocol to provide convenient and effective technical support for the operation of charging piles.

ETEK Electric has passed ISO9001 quality management system and environmental management system certification. The company have built our own low-voltage electrical testing center, and most of the testing items can meet the requirements of international IEC standards, in addition, our products have obtained international CB, TUV, VDE, CE, RoHS and other quality certificates.

We also support OEM, ODM, OBM, SKD, CKD and other business cooperation models, and provide customers with a full range of services covering market cultivation, technical training, and factory construction.

Looking forward to the future, ETEK Electric will be committed to becoming a globally renowned manufacturer in the power distribution and electrical industry, safeguarding the power safety of global customers, and helping the development of green and digital energy.

### Brief Description

The EKDC1 series of small DC charging piles are designed for 20kW/30kW single-gun charging and 40/60kW dual-gun charging. The product can be installed in a pole-mounted or wall-mounted manner and supports the OCPP1.6J communication protocol. It can be connected via Wi-Fi, 4G, or Ethernet, supporting scheduled charging, smart charging, and DLB (Dynamic Load Balancing) function.

It features overload protection, lightning protection, short-circuit protection, leakage protection, and an emergency stop function. The product inside using our own SECC and DC EV charge controller supports remote upgrades, remote diagnostics, and real-time monitoring of charging status via a mobile app. Users can set charging times and even perform remote control, facilitating operation and maintenance while ensuring the safety of the charging process.

It is suitable for private residences, commercial office buildings, urban complexes, parking lots, or public charging stations, and supports charging for 99% of vehicle models on the market.

### Model Preparation Meaning

Code	Meaning

②	DC EV charging station design number	
③	C: 1×CCS2 gun A: 1×CCS1 gun G: 1×GB/T gun J: 1×CHAdeMo gun CC: 2×CCS2 guns AA: 2×CCS1 guns GG: 2×GB/T guns	JJ: 2×CHAdeMo guns CG: 1×CCS2 gun+1×GB/T gun CA: 1×CCS2 gun+1×CCS1 gun CJ: 1×CCS2 gun+1×CHAdeMo gun GA: 1×GB/T gun+1×CCS1 gun GJ: 1×GB/T gun+1×CHAdeMo gun AJ: 1×CCS1 gun+1×CHAdeMo gun
④	20kW, 30kW, 40kW, 60kW	
⑤	Blank: wall mounting	P: Column or post mounting

**Technical Data**

Power	20kw/30kw/40kw/60kW
Connector	GBT/CCS1/CHAdeMO/CCS2 optional
Connector number	20kW/30kW Single gun; 40kW/60kW Double guns
Input voltage	AC380V-415V, 3P+N+PE
Frequency	50/60Hz
Maximum output current	0-50A(20kW), 0-100A(30kW), 0-125A(40kW)
Output voltage	50V~1000VDC
User Interface	Led Indicator Green/Yellow/Red
	7.0 Inch LCD Display
	RFID Mifare ISO/IEC14443 A
Emergency stop button	Yes
Charge mode	Plug&charge,RFID,APP
Communication protocol	OCPP1.6J or other
Communication	Ethernet/4G/Wifi (4G and wifi optional)
Electrical protection	Over current protection, Short circuit protection, Ground protection, Surge protection, Over/Under voltage protection, Over/Under frequency protection, Over/Under temperature protection
Energy meter	Yes
Charging stands	EN/IEC 61851-1:2019, IEC 61851-1:2017, EN 61851-23: 2014, IEC 61851-23: 2014 EN 61851-24:2014, IEC 61851-24:2014, EN/IEC61000-6-2: 2019, EN/IEC 61000-6-4:2019 EN/IEC 61851-21-2:2021
Ingress protection	IP54
Impact protection	IK10 (Screen IK08)
Work temperature	-30°C~+50°C
Work humidity	5%~95%
Work altitude	<2000m
Product dimension	420x230x620mm(20kW/30kW); 560X770X250mm(40kW/60kW)
Package dimension	455x550x810mm(20kW/30kW); 1010x840x510mm(40kW/60kW)
Net weight	20kW≤40kg; 30kW≤50Kg; 40kW≤75kg; 60kW≤100kg
Gross weight	20kW≤45kg; 30kW≤55Kg; 40kW≤80kg; 60kW≤130kg
External package	Carton
Installation mode	Post/wall mounting

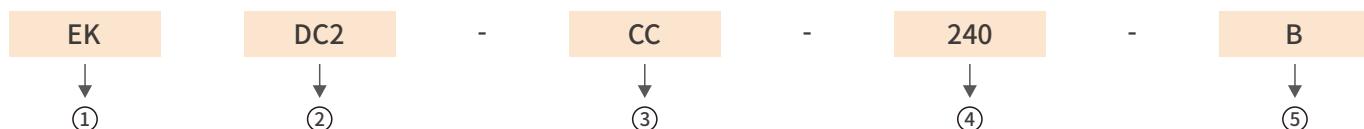

### Brief Description

The EKDC2 series of floor-standing DC charging piles are designed for European standard 60kW-240kW dual-gun charging, it using same frame size for different power, it has designs with swing arm and without swing arm. The product inside using our own SECC and DC EV charge controller and supports the OCPP1.6J communication protocol, with connectivity options including Wi-Fi, 4G, and Ethernet. It features overload protection, lightning protection, short-circuit protection, leakage protection, and an emergency stop function.

The product supports remote upgrades, remote diagnostics, and real-time monitoring of charging status via a mobile app, as well as remote control, facilitating operation and maintenance while ensuring the safety of the charging process. It is suitable for charging locations such as parking lots or public charging stations and supports charging for 99% of vehicle models on the market.

### Overview

EKEC1 is a mode 3 charging device that provides full support for all electric vehicles. Its unique feature is that the controller module is equipped with a variable current selector, giving customers the flexibility to choose from five different charging levels. The product series includes two major categories: cable version and socket version to meet the changing needs in different scenarios.

In terms of design, EKEC1 follows rigorous industrial design principles and can be quickly installed in homes and commercial places. At the same time, the protection level of the whole machine reaches the IP54 standard, ensuring that it has excellent dust and water resistance, providing users with a stable and reliable charging experience.

### Features

- Adjustable charging current values 10A, 16A, 20A, 25A and 32A.
- Rated power up to 22kW (three-phase 32A).
- Support OCPP-1.6-J charging protocol (requires EKEPC3 controller).

- Multiple protections can be achieved through different combinations of internal components, safe and reliable.
- Internal components are modular devices, easy to maintain.
- Two versions: cable version and socket version.
- IK08 or higher impact-resistant design

## Overview

The EKEC2 EVSE (Electric Vehicle Supply Equipment) portable charger is a charging device specially designed according to IEC 62752, IEC 61851-1 standards, consisting of a control box, charging connector, plug, etc., which is a portable electric vehicle charging device. The device delivers up to 22kW output power.

The distinctive feature of this device is its portability and efficiency, allowing car owners to charge electric vehicles through standard household power interfaces at any location, thus ensuring the convenience and flexibility of charging.

## Features

- Rated power up to 22kW (32A three phase)
- Multiple current levels are adjustable to meet different charging needs
- Schedule charging at scheduled times and charge at off-peak hours to save money
- Multiple protection functions, safe and reliable
- LED indicator + LCD screen dual display to accurately control charging status
- IP65 waterproof and dustproof, easy to charge in harsh environments
- Corrosion resistant and flame retardant
- IK10 level impact resistant design

## Technical Data

Style	Style A&B		Style C&D	Style D

Model	EKEC10-D14	EKEC10-D22	EKEC10-D44
Power supply	1P+N+PE	3P+N+PE	
Rate voltage	230V±10% AC	400V±10% AC	
Rate current	32A	16A	32A
Frequency		50/60Hz	
Rated power	7kW+7kW	11kW+11kW	22kW+22kW
LED indicator		Green/Yellow/Red	
LCD display		5.0 Inch	
RFID		Mifare ISO/IEC 14443 A	
Charge mode		Plug&Charge, RFID, App	
Emergency stop		Yes	
WiFi		optional	
Ethernet		Yes	
4G		optional	
OCPP		OCPP 1.6 J	
Energy meter		Mid Meter (optional)	
RCD+RDC-DD		30mA Type A + DC 6mA	
Ingress protection		IP54	
Impact protection		IK08	
Electrical protection	Over current , Residual current , Short circuit , Ground, Lightning , Over/Under voltage , Over/Under frequency , Over temperature		
Extended function	PEN, DLB, RS485 communication, Input solar power		
Type of EV connection	Case B(Socket Version); Case C(Cable Version)		
Universal interface	T1:SAE J1772, T2:IEC/EN 62196-2,GB/T:20234.2-2015		
Warranty	2 years		
Installation	Floor type		
Work temperature	-30°C~+50°C		
Work humidity	5%~95%		
Product dimension	<2000m		
Package dimension	460×180×310mm		
Net weight	500×400×400mm		
Gross weight	≤11kg	≤12kg	≤13kg
External package	≤13kg	≤14kg	≤15kg
External Package	Wooden box		
Certification	CE		
Certification standard	EN/IEC 61851-1: 2017, EN/IEC 61851-21-2: 2018		

## overview

EKEPC2 is an AC charging pile controller designed for DIN rail installation. As the core intelligent control component of the AC charging pile, it complies with the IEC61851-1 or GB18487.1-2015 standards and can achieve outstanding performance of up to 32A charging current in mode 3.

EKEPC2 supports Modbus-RTU protocol and RS485 communication, has highly flexible expansion capabilities, and is compatible with a variety of devices, including but not limited to contactless IC cards, residual current detection devices (RCMU), DLB current detection devices, LCD displays, energy meters, electromagnetic locks, and external emergency stop buttons. Together, these devices enable the diverse functions of the charging pile, including DLB (dynamic load balancing) and PEN fault protection.

These features provide charging pile manufacturers and installers with a cost-effective solution that can meet charging needs in different application scenarios.

## Product Features

- Compliant with IEC 61851-1 standard (mode 3 charging)
- Modular design, rail installation
- Adjustable charging current (maximum 32A)
- Support Modbus-RTU protocol and RS485 communication method
- Configurable master and slave devices
- Equipped with dynamic load balancing management (DLB) function

## Technical Data

Model	EKEPC2-C (Socket type)	EKEPC2-S (Cable type)
Operating voltage	AC230V±10%	
Auxiliary output voltage	DC12V/100mA, DC5V/100mA	
Charging mode	Mode 3 according to IEC61851-1 via IEC62196-2 or SAE J1172 (socket or tethered cable outlets)	
Charging current	16A(6-8-13-16A Adjustable), 32A(10-16-20-25-32A Adjustable), 63A(Customized)	
Basic functions	Over-temperature protection	
Additional functions and compatible devices	<ul style="list-style-type: none"> <li>• DC leakage current detection (<math>\geq 6\text{mA}</math>), requires external RCMU;</li> <li>• RFID start-stop function, requires an RFID card and an external card reader;</li> <li>• LED charging status display and LCD screen display, external LED lights and LCD screen are required;</li> <li>• Solenoid interlock for socket;</li> <li>• DLB requires an external 100A/5A ratio CT or MID meter;</li> <li>• Real-time monitoring of voltage, current, and power requires an external 100A/5A ratio CT and MID-certified meter;</li> <li>• PEN fault protection, external SPD is required;</li> <li>• Emergency stop function requires an external emergency stop button switch;</li> <li>• Over-voltage, under-voltage, and over-current protection settings need to be configured in the software background.</li> </ul>	

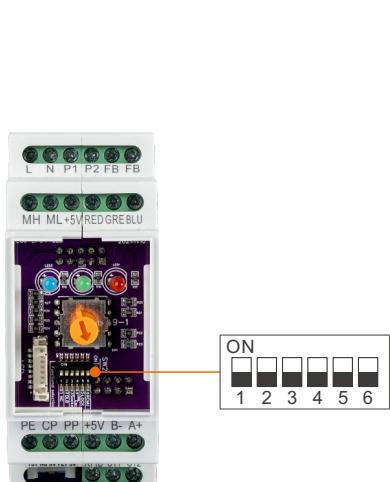

Communication protocol	Modbus-RTU protocol and RS485 communication mode
Operating temperature	-25°C~+50°C
Relative humidity	5%~95%
Altitude	≤2000m
Protection grade	IP22
Cooling method	Natural cooling
Mounting	DIN rail (35mm)

### Controller Terminals

Terminal	Description
L	Connects to AC "live" or "line" with 230V±10%@50Hz
N	Connects to AC "neutral" line with 230V±10%@50Hz
P1	A1 Connect to contactor coil A1
P2	A2 Connect to contactor coil A2
FB	
FB (0V)	Feedback signal of solenoid interlock. If lock feedback is selected, the lock feedback of solenoid interlock is read.
MH	Provides a drive current to continuously energize the solenoid interlock. Provides a drive current to change the motorized interlock state to locked, the signal is activated for 500ms and changes to pulse 500ms intervals until the lock is closed. Rating 12V 300mA.
ML	Provides a return path for the solenoid interlock drive current ML. Provides a drive current to change the motorized interlock state to unlocked. Rating 12V 300mA.
0V	0V connection terminal for RCMU and IC card circuit
RED	Connected to the red indicator light, rating 5V 10mA
GRE	Connected to the green indicator light, rating 5V 10mA
BLU	Connected to the blue indicator light, rating 5V 10mA
IC	Connect the input signal of the IC card control to the TTL level signal (DC 3.3V/5V), and connect the other side to the 0V terminal.
FLT	Connect to the RCMU "Fault Out" to read the fault signal from the RCMU.
TST	Connect to the RCMU "Test". The controller sends a test signal to the RCMU before each charging to detect whether the RCMU is working normally.
+12V	12V power supply, Rating DC+12V, 100mA
CT1	Connect to the main circuit CT1. When the controller turns on the DLB function, it is necessary to connect the main circuit CT signal (signal: AC0-5A).
CT2	Connect to the other side of the main circuit, CT1.
PE	Power ground terminal
CP	Control Pin. Connects to the CP of IEC61851/J1772 EVSE socket/plug.
PP	Proximity Pin. Connects to the PP of IEC61851 EVSE socket.
+5V	5V power supply, Rating DC+5V,100mA
A+	They are connected to the A+ and B- ports of RS485 communication respectively and can communicate with RS485 devices. The communication standard complies with the Modbus-RTU mode, baud rate: 9600, n,8,1, and the default address number is: 01.
B-	

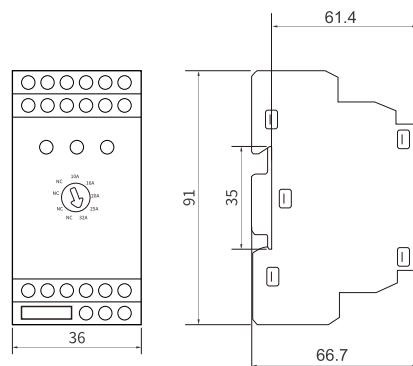

## DIP Switch Description

To cater to the DIY needs of users, this controller features an integrated DIP switch on the PCB board (the controller cover needs to be removed), which allows users with a certain level of electrical knowledge to more easily implement various additional functions.

Switch position	No.	Description
ON	1	Led indicator waiting for inspection status
	2	DLB current balance working mode
	3	Socket version working mode
	4	Function with RFID
	5	With electronic lock function
	6	Added RCMU(DC6mA) module function
OFF	1	No Led indicator waiting for inspection status
	2	Normal DLB balance working mode
	3	Cable version working mode
	4	Lost (without) IC card working mode
	5	Without electronic lock function
	6	None RCMU(DC6mA) protection function

## Overall and Installation Dimension(mm)

## overview

EKEPC3 charging controller is a highly integrated and intelligent modular electric vehicle charging controller that complies with the IEC61851-1 standards and can provide up to 32A of charging current in mode 3.

EKEPC3 charging controller allows users to remotely monitor the charging status, start and stop charging, set charging time, and adjust charging power through a web portal. It can also implement load management strategies to prevent grid or circuit overload and optimize power distribution in multi-charging point systems. Additionally, the EKEPC3 controller provides authentication functions (such as RFID, PIN code), ensuring the safety and convenience of charging operations.

EKEPC3 charging controller is equipped with built-in OCPP-J-1.6, 4G, Wi-Fi (2.4G), and Ethernet modules, enabling it to easily communicate with various backend systems and access payment, load management, charging scheduling, and access control functions provided by the platform. Additionally, the controller supports OTA firmware updates to introduce new features, improve performance, or address potential security vulnerabilities in a timely manner.

EKEPC3 charging controller is a reliable solution for creating smart charging sites for electric vehicles, suitable for both home and commercial applications.

## Product Features

- Comply with standard IEC61851-1 (mode 3 charging)
- Supports 1 outlet, Socket, or tethered cable
- Provide three working modes: host, slave, and master-slave
- Support OCPP-J-1.6, Modbus RTU protocol, 2.4G Wi-Fi, Ethernet, RS485 communication
- Modular design, 35mm DIN rail mount
- Adjustable charging current (maximum 32A)
- Status LED and external LED, LCD support
- RFID access control support
- RCM support for >6mA DC leakage current
- PEN fault protection
- With dynamic load balancing management (DLB) function
- OTA firmware update
- Support ISO15118

**Technical Data**

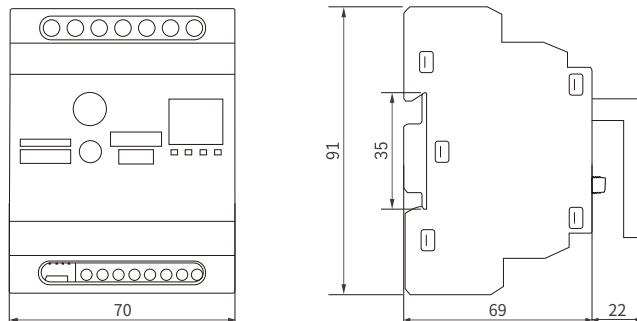

Model	EKEPC3
Operating voltage	170-260V @ 50/60Hz AC
Auxiliary output voltage	DC12V/100mA, DC5V/100mA
Power consumption	≤3W
Charging mode	Mode 3 according to IEC61851-1 via IEC62196-2 or SAE J1172 (socket or tethered cable outlets)
Charging current	Max. 32A (1~32A, Adjustable)
Basic functions	Over-temperature protection (threshold 95°C)
Additional functions and compatible devices	<ul style="list-style-type: none"> <li>• DC leakage current detection (<math>\geq 6\text{mA}</math>), requires external RCMU;</li> <li>• RFID start-stop function, requires an RFID card and an external card reader;</li> <li>• LED charging status display and LCD screen display, external LED lights and LCD screen are required;</li> <li>• Solenoid interlock for socket;</li> <li>• DLB requires an external 100A/5A ratio CT or MID meter;</li> <li>• Real-time monitoring of voltage, current, and power requires an external 100A/5A ratio CT and MID-certified meter;</li> <li>• PEN fault protection, external SPD is required;</li> <li>• Emergency stop function requires an external emergency stop button switch;</li> <li>• Over-voltage, under-voltage, and over-current protection settings need to be configured in the software background.</li> </ul>
Communication protocol	OCPP-J-1.6, Modbus RTU protocol, 2.4G Wi-Fi, Ethernet, RS485 communication
Operating temperature	-25°C~+50°C
Relative humidity	5%~95%
Altitude	≤2000m
Protection grade	IP22
Cooling method	Natural cooling
Mounting	DIN rail (35mm)

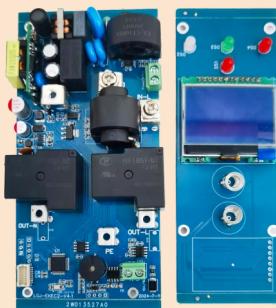

**Controller Terminals**

Terminal	Description
L	Connects to AC "live" or "line" with $230V \pm 10\% @ 50Hz$
N	Connects to Ac "neutral" line with $230V +10\% @ 50Hz$ , Connect to contactor A1 terminal.
P1, P2	P1 and P2 are passive output contacts, providing 250VAC/2A output capacity.
	P1 is connected to the power supply L terminal, and P2 is connected to the contactor A2 terminal.
PP	Proximity Pin. Connects to the PP of IEC61851 EVSE socket.
CP	Control Pin. Connects to the CP of IEC61851/J1772 EVSE socket/plug.
PE	Power ground terminal
RCMU	RCMU residual current sensor connection terminal, connected using the connection line provided with the RCMU module.
0V	0V connection terminal
5V	5V power supply, Rating DC+5V,100mA

MH	Provides a drive current to continuously energize the solenoid interlock. Provides a drive current to change the motorized interlock state to locked, the signal is activated for 500ms and changes to pulse 500ms intervals until the lock is closed. Rating 12V 300mA.
ML	Provides a return path for the solenoid interlock drive current ML. Provides a drive current to change the motorized interlock state to unlocked. Rating 12V 300mA.
FB FB (0V)	Feedback signal of solenoid interlock. If lock feedback is selected, the lock feedback of solenoid interlock is read.
B-	They are connected to the A+ and B- ports of RS485 communication respectively and can communicate with RS485 devices. The communication standard complies with the Modbus-RTU mode, baud rate: 9600,n,8,1, and the default address number is: 255H.
A+	
SIM-CARD	SIM card slot supports multiple network standards and frequency bands. LTE-FDD:B1/B3/B5/B8 LTE-TDD:B34/B38/B39/B40/B41 GSM/EDGE:B3/B8
WIFI (2.4G)	SIM card slot supports multiple network standards and frequency bands.
4G	4G patch antenna interface (824-2170MHz)
LCD	External LCD display interface
LED-OUT	External LED status indicator interface
WAN	WAN port: wide area network port
R-G-B-Y	Charging Status Indicator Position Marker

### Overall and Installation Dimension(mm)

### Brief Description

EKEPCB1 is using for mode 2 portable EV charger complies with IEC61851-1 or SAEJ1772 standard, input voltage is 230V~, max current up to 32A, charging current can selection, it has functional of status indicating, LCD display, charging time reservation, free PE connection, protection of over temperature, over/under voltage, over current and residual current current protection AC30mA+DC6mA.

### Technical Specification

Model	EKEPCB1-C
Mode	Mode 2 charging
Operating voltage	AC230V±10%, 50Hz
Output the PWM signal	Max: 16A, 6A/8A/10A/13A/16A adjustable Max: 32A, 6A/8A/10A/13A/16A/20A/25A/32A adjustable
Basic function	<ul style="list-style-type: none"> <li>• IEC62955 standard AC 30mA and DC6mA leakage monitoring</li> <li>• Overtemperature protection</li> <li>• Overvoltage &amp; undervoltage protection</li> <li>• Over current protection</li> <li>• Voltage, current, Power for real time monitoring</li> </ul>
Additional function	LCD display function with an auxiliary device of LCD screen
Output auxiliary voltage	DC12V/100mA, DC5V/100mA
Ambient temperature	-40°C ~ +50°C
Humidity	≤85%
Cooling method	Natural cooling
Installation method	PCB mounted

## Overview

EKRCMU-1 is a residual current sensor with a highly integrated modular design, combining Type A RCD functionality with 6mA DC leakage detection, specially developed for charging pile leakage detection, Compliant with IEC 62955.

Its main function is to respond quickly when the charging pile detects residual current during operation, effectively preventing potential safety hazards caused by leakage, including but not limited to fire or electric shock accidents, thereby ensuring the safety and stability of the entire charging process, and is widely used in charging piles that meet mode 3 charging.

## Features

- Dual Protection: Integrates Type A RCD functionality with 6mA DC leakage detection in a single unit.
- IEC 62955 Compliance: Meets the requirements of IEC 62955, the international standard for RCMU in EV charging stations.
- Enhanced DC Protection: Detects DC leakage currents as low as 6mA, crucial for modern EV charging safety.
- Connection Types: Suitable for both three-phase and single-phase connections.
- Fast Response Time: Interrupting Time according to IEC62752: 5.3.11 Table 2 and 3.
- Self-Monitoring: Continuous self-test functionality ensures reliable operation.
- Compact Design: Engineered to be compact for easy integration into EV charging stations.

## Applications

- |   |                                  |
|---|----------------------------------|
| • Mode 2 or Mode 3 AC charging stations | • Home and workplace EV chargers |
| • Combined AC/DC charging points        | • Public charging infrastructure |

## Main Technical Data

Operating voltage	4.85~5.15V DC
Working current	10mA (typ.)
Power consumption	≤110mW
Voltage input/output, low level	0~0.6V DC
Voltage input/output, high level	4.2~5V DC
Leakage protection type	Type A + 6mA DC
Scope of application	Max. adaptable to 22kW single-phase or three-phase
Connection method	Pin strip 5-pos.
Ambient air temperature	-40°C~+85°C
Storage temperature	-40°C~+105°C
Humidity	≤95%

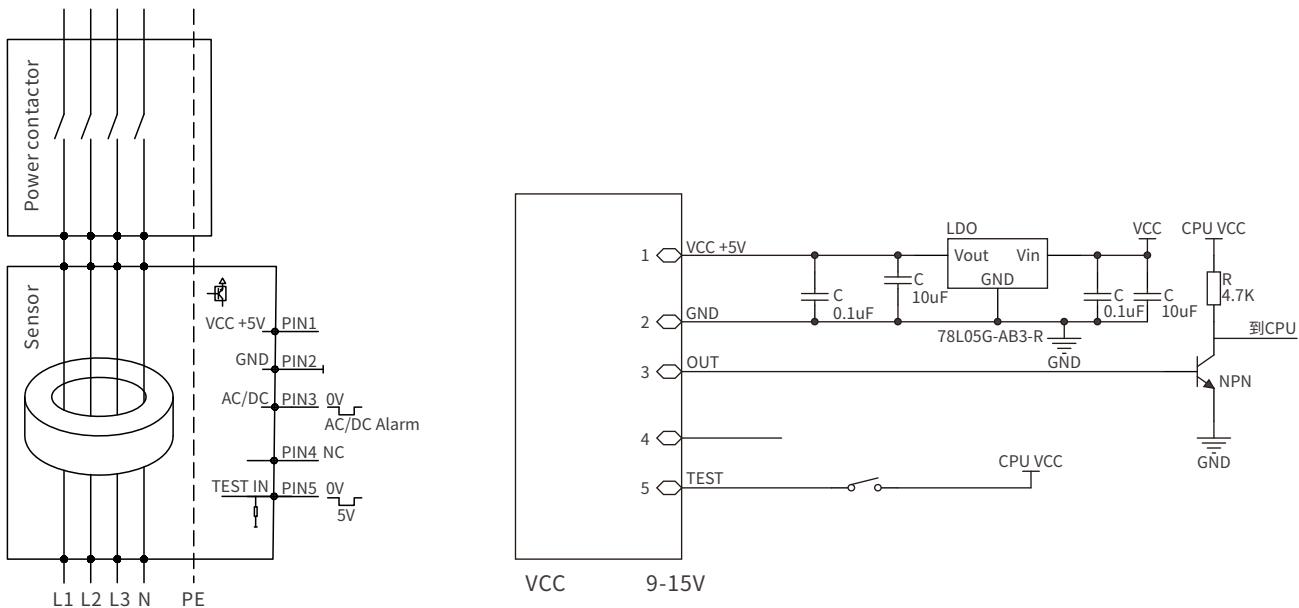

**Leakage Parameters**

Parameter	Symbol	Condition	Min.	Typ.	Max.
Primary rated current (A)	$I_P$	-	-	32	40
Measurement range (peak value) (mA)	$I_{\Delta N, \text{max}}$	-	-300 ①	-	300
Frequency measurement range (kHz)	$f_{\text{BW}}$	-	DC	-	1
Rated residual operating current 1(mA) DC	$I_{\Delta N1}$	-	3.0	4.8	6
Rated residual operating current 2 (mA) rms ②	$I_{\Delta N2}$	-	15	22	30
Response time (ms) ③	Tr	AC: $I_n=1*I_{\Delta N2}$	-	150	300
		AC: $I_n=2*I_{\Delta N2}$	-	90	150
		AC: $I_n=5*I_{\Delta N2}$	-	25	10
		DC: $I_n=1*I_{\Delta N1}$	-	300	10000
		DC: $I_n=10*I_{\Delta N1}$	-	90	300
		DC: $I_n=50*I_{\Delta N1}$	-	25	40

① The negative sign represents the direction of current flow.

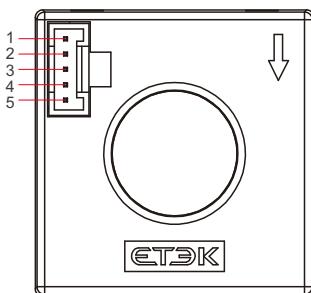

② Hz=50Hz.

③ Interrupting Time according to IEC62752: 5.3.11 Table 2 and 3.

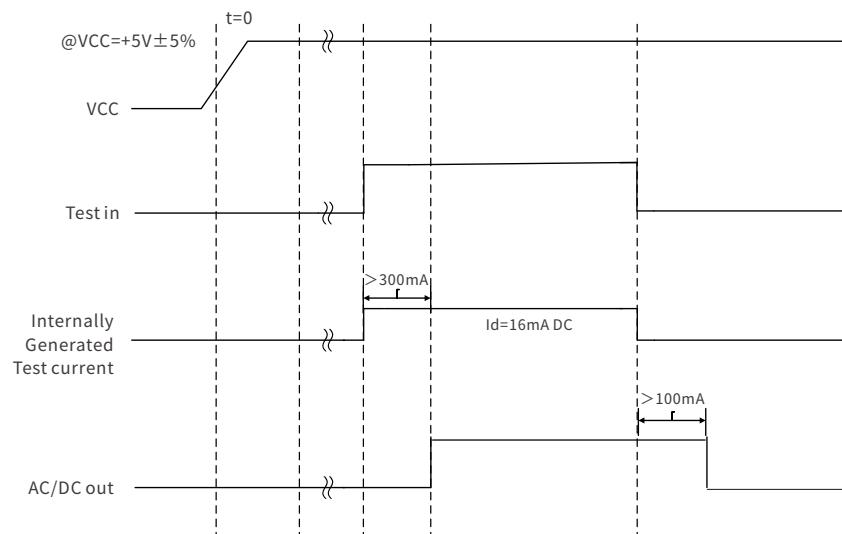

**Application Circuit**

The detection module is sensitive to AC and DC currents and can be used for residual current detection of mode 2 or mode 3 charging equipment. The detection module detects AC and DC fault currents according to the IEC62752/IEC62955 standard requirements. In the case of an AC/DC fault current, PIN3 changes its state from a low level (GND) to a high-level state.

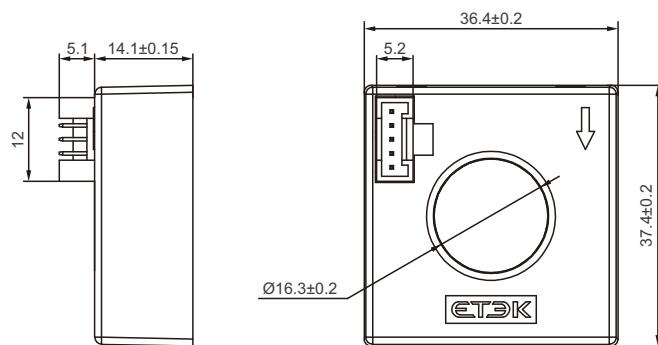

No.	Symbol	Description
PIN-1	VCC	<ul style="list-style-type: none"> <li>Product power supply pin, standard supply voltage 5V DC.</li> <li>Input voltage range required is 4.8~5.2V DC.</li> </ul>
PIN-2	GND	Power ground pin
PIN-3	TRIP	When it is detected that the residual current in the line exceeds the threshold (30mA or 6mA DC), the output level of PIN3 changes from low to high level state, and the driving current is 2mA.
PIN-4	/	NC-Float
PIN-5	TEST	<ul style="list-style-type: none"> <li>Before starting charging, perform a simulation test on the product through this pin to verify whether the product function is normal.</li> <li>If this pin is connected to a high-level state, the functional test is activated (the activation voltage range must be 3V~12V).</li> </ul>

### Power Up and Test Mode

### Dimension (mm)

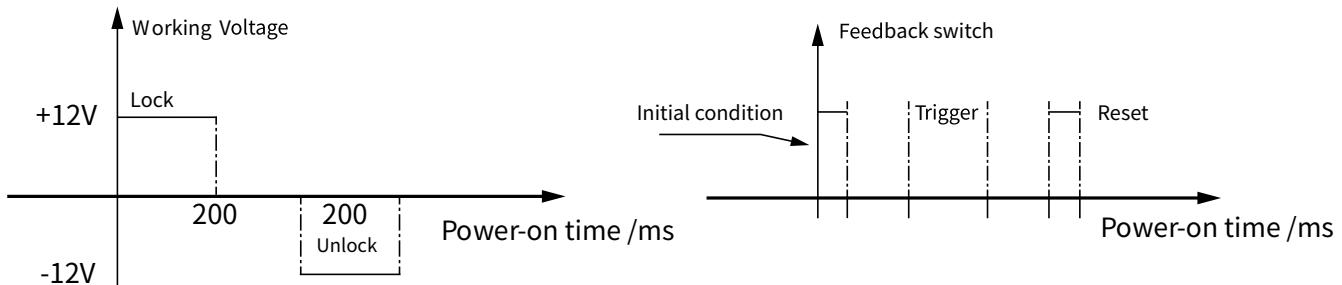

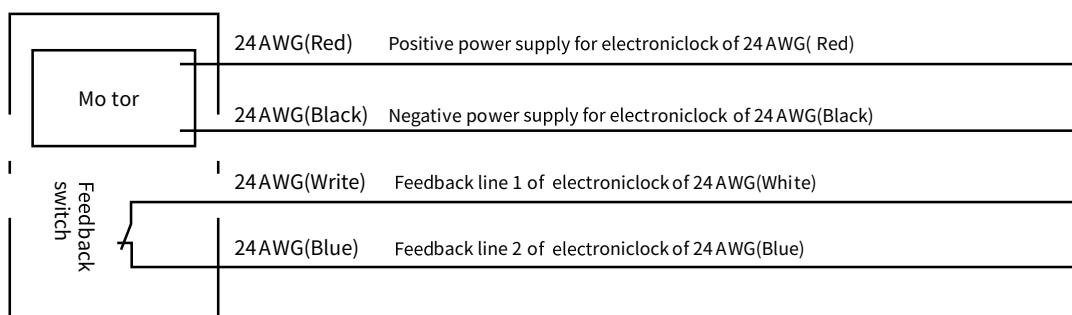

### Impluse Electronic Lock Technical Parameters

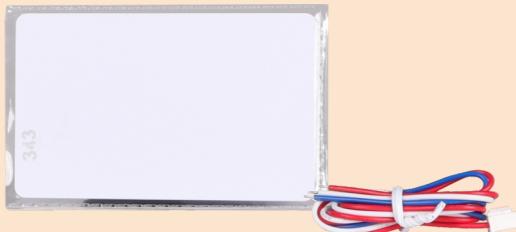

Working power supply	DC12V/500mA
Max. working current	≤500mA
No-Load current	<50mA
Locking mechanism retention force	<80N
Locking mechanism breaking force	≥200N
Angle of rotation	≤90°
Response time	<50ms
Maximum power-on time	3.5s
Complete lock time	<300ms
Ambient temperature	-40°C~+80°C
Electrical life	≥30,000 cycles
Insulation resistance	500MΩ
Power-on action time	0.2s < t < 1.0s
Pulse duty factor	35%
Protection degree	IP55
Manual unlocking pull	≤5N
Manual unlock life	≥30,000 cycles

### Function Description

Red line (+12V)	Black line (0V)	Status	Feedback signal
+12V	0V	Lock condition	Switch connected
No-Load current	+12V	Unlock condition	Switch disconnected

### Electrical Wiring Principle

RFID Card

RFID Module

## RFID

The charging station can be configured with contactless IC card swiping function, and charging can only be carried out through authorized IC card. If the IC card is lost, the internal dip switch can be used to set the IC card losing module. There are 2 IC cards which are authorized by the factory, unless specify that we can provide more IC cards.

## LCD Display

The charging station can provide an analog input function, the input analog is AC0-1.0V, which is used to display the current working current. When the detected working current is greater than the set current value, the charging station will reduce the charging current to the set current value. Thereby ensuring the safe and reliable operation of the charging station.

### Display Content

#### EKEC Series Charging Station

Operation voltage: 220V Set current: 32.0A Output Current: 32.0A

Electricity consumption: 15.8kWh

Charging time: 1 h 01 min 01 s

Operation status: Charging

Device status: Normal

Communication status: Connecting

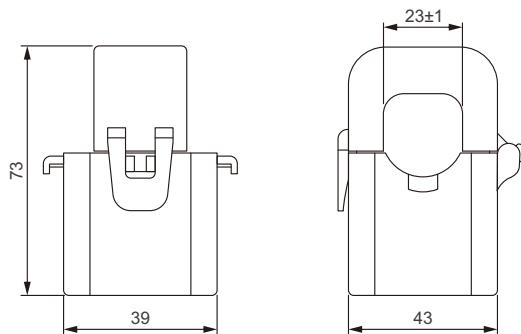

The charging station with a LCD to display which can show the working status and charging related data, it is convenient and intuitive.

### Technical Data

Rated operating voltage	$\leq 0.66\text{kV}$
Rated operating frequency	50-60Hz
Current ratio	100/5A
Rated input	100A
Measuring range	10%In~120%In
Rated output	0.333V or 500mA
Accuracy	class 0.5
Ratio difference	$\leq \pm 1\%$
Phase difference	$\leq \pm 10\text{min}$
Dielectric strength	2.5kV/1mA/1min
Insulation resistance	500VAC/500 M $\Omega$
Shell	ABS/UL94-V0
Operating temperature	-40°C~+70°C
Ambient humidity	$\leq 85\%$
Window hole size	24mm
Installation method	Cable tie fixation

### Dimension (mm)

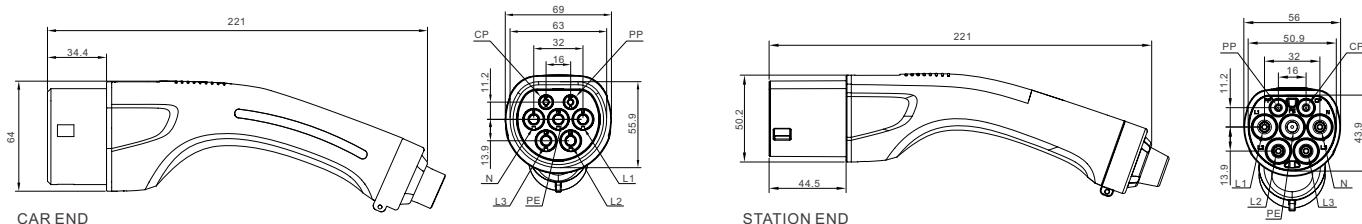

### Main Parameter

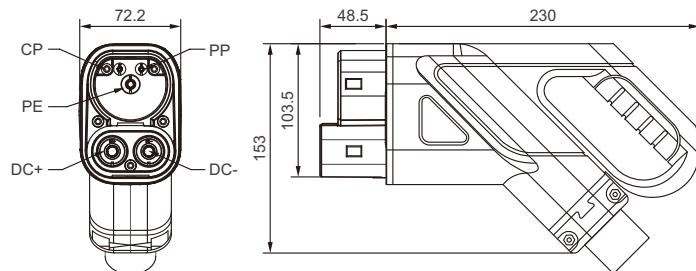

Operation voltage	230V±10% 50Hz; 400V±10% 50Hz
Operation current	16A, 32A
Continuously using time	Continuously working 24h
Conductive terminal temperature rise	≤50K
Insulation resistance	≥500MΩ, DC500V
Withstand voltage	2500V/min
Contact resistance	≤0.3Ω
Mechanical life	5,0000 times or more
Insertion / pulling force during connection	45N~80N
Withstanding impact	Tolerable to 2 ton car rolling or 1m height drop without damage
Conductor material	Copper alloy + silver plating
Enclosure material	Thermoplastic flame retardant plastic, flame retardant grade UL94V-0
Ambient temperature	-40°C ~ +50°C
Humidity	<85%

## Overview

This product is AC V2L (Vehicle to load) discharge gun, support the use of two-way OBC new energy vehicle to load discharge, the vehicle battery pack DC power into AC output, voltage 220-240V, current up to 16A, general discharge power in 2kW to 6kW, through the AC discharge gun with the electric car to become a mobile power station function or camp power supply. Mode

## Technical Data

Mechanical life	Insertion and unplugging above 10000 time
Connected force	F<100N
Operating temperature	-30°C ~ +50°C
Withstand voltage	2000V
Material	Housing thermoplastic, flame retardant grade UL94 V-0 Terminal: Copper alloy, silver plating
Insulation resistance	>1000MΩ(DC500V)
Terminal temperature rise	<50K
Contact Resistance	0.5mΩ

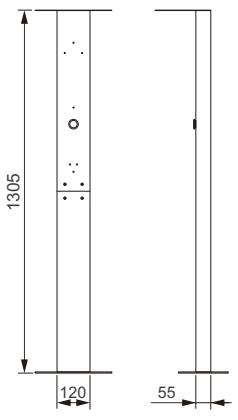

## Product Model Specifications

Model	Plug	Socket style	Voltage	Rated current	Cable
EKDP-F	Typ2 2 plug	Type F- Shuko socket	240V	16A	3meter, 3×2.5mm <sup>2</sup>
EKDP-N	Typ2 2 plug	Type N- Brazil socket	240V	10A/20A	3meter, 3×2.5mm <sup>2</sup>
EKDP-G	Typ2 2 plug	Type G-UK socket	240V	13A	3meter, 3×2.5mm <sup>2</sup>
EKDP-A	Typ2 2 plug	Type A-China Scocket	240V	10A/16A	3meter, 3×2.5mm <sup>2</sup>

**Portable Charger Bracket**

	Model	Description
	EKEC2ZJ	Suit for all portable EV charger
	EKC2ZJ2	Suit for EKEC2 Style B

**AC Charging Station Post**

	Model	Description	Dimension (mm)
	EKLZ	Suit for all AC charging station	

Overall and Installation Dimension(mm)

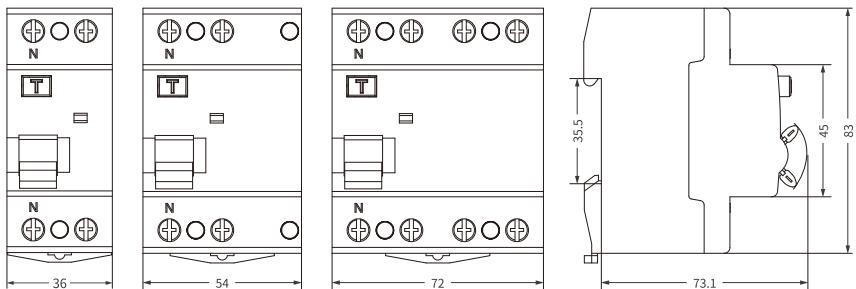

### Technical Data

Standard	IEC/EN 61008-1
Protection	Ground fault
Type of trip	Electro-magnetic
Residual current type	AC, A, A-G / A-SI, A-S
No. of poles	2P(1P+N), 4P(3P+N) , N Pole on left
Rated voltage (Ue)	1P+N: 230/240V~, 3P+N: 400/415V~
Rated currents (In)	16,25,32,40,63,80,100A
Rated sensitivity currents (IΔn)	10,30,100,300mA (10mA only for In=16-25A)
Residual current off-time under (IΔn)	A/AC≤300ms; A-G / A-SI: 10-300ms; A-S:130-500ms
Rated residual making and breaking capacity (IΔm)	500A(In≤50A), 10In(In>50A)
Rated frequency	50/60Hz
Rated conditional short-circuit current (Isc)	EKL6-100: 6kA, EKL6-100H: 10kA
SCPD fuse	
Rated impulse withstand voltage (Uimp) (1.2/50μs)	4kV
Dielectric test voltage	2kV (50/60Hz, 1 min.)
Electrical life	2,000 Cycles
Mechanical life	4,000 Cycles
Contact position indicator	green OFF / red ON
Ground fault indicator	White: Normal, Red: Leakage fault
Protection degree	IP20
Ambient temperature	-25°C to +40°C, Max.95% humidity
Terminal connection type	Cable/Pin-type busbar/Fork-type busbar
Max. terminal size for cable	35mm <sup>2</sup>
Max. tightening torque	2.5N.m
Installation	Mounting on 35mm DIN rail
Incoming method	Bi-Directional

Dimension(mm)

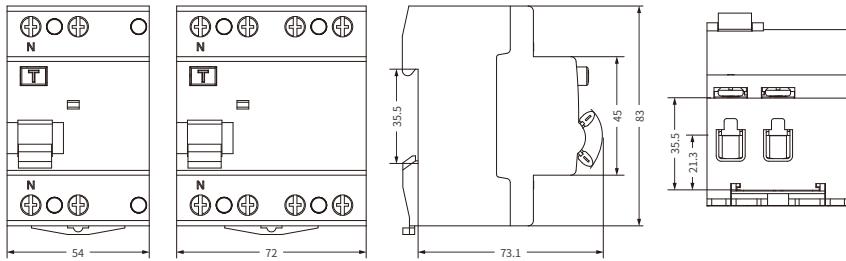

## Technical Data

Standard	IEC 61008-1, IEC 62423
Protection	Ground fault
Type of trip	Electro-magnetic
Residual current type	B
No. of poles	2P(1P+N), 4P(3P+N), N Pole on left
Insulation voltage (Ui)	500V
Rated voltage (Ue)	2P(1P+N):110/230/240V~, 4P(3P+N):240/400/415V~
Rated currents (In)	16,25,32,40,63,80,100A
Rated sensitivity currents (IΔn)	30,100,300mA
Residual current off-time under (IΔn)	≤ 0.1s
Rated residual making and breaking capacity (IΔm)	500A(In≤50A), 10In(In>50A)
Rated frequency	50/60Hz
Rated conditional short-circuit current (Inc)	10kA
SCPD fuse	[10000]
Rated impulse withstand voltage (Uimp) (1.2/50μs)	4kV
Dielectric test voltage	2.5kV (50/60Hz, 1 min.)
Electrical life	2,000 Cycles
Mechanical life	4,000 Cycles
Contact position indicator	green OFF / red ON
Ground fault indicator	White: Normal, Red: Leakage fault
Protection degree	IP20
Ambient temperature	-25°C to +40°C, Max.95% humidity
Terminal connection type	Cable/Pin-type busbar/Fork-type busbar
Max.terminal size for cable	35mm <sup>2</sup>
Max.tightening torque	2.5N.m
Installation	Mounting on 35mm DIN rail
Incoming method	Bi-Directional

Dimension(mm)

### Technical Data

Standard	IEC 61008-1, IEC 62955
Protection	Ground fault
Type of trip	Electro-magnetic
Residual current type	A
Classification of RDC-DD	RDC-PD
No. of poles	2P(1P+N), 4P(3P+N) , N Pole on left
Insulation voltage (Ui)	500V
Rated voltage (Ue)	2P: 240V~, 4P: 415V~
Rated currents (In)	16,25,32,40,63A
Rated sensitivity currents (IΔn)	30mA
Rated residual operating current (Iadc)	6mA
Residual current off-time under (IΔn)	≤ 0.1s
Rated residual making and breaking capacity (IΔm)	500A( $I_n \leq 50A$ ), $10I_n$ ( $I_n > 50A$ )
Rated frequency	50/60Hz
Rated conditional short-circuit current (Inc)	10kA
SCPD fuse	10000
Rated impulse withstand voltage (Uimp) (1.2/50μs)	4kV
Dielectric test voltage	2.5kV (50/60Hz, 1 min.)
Electrical life	2,000 Cycles
Mechanical life	4,000 Cycles
Contact position indicator	green OFF / red ON
Ground fault indicator	White: Normal, Red: Leakage fault
Protection degree	IP20
Ambient temperature	-25°C to +55°C, Max.95% humidity
Terminal connection type	Cable/Pin-type busbar/Fork-type busbar
Max.terminal size for cable	35mm <sup>2</sup>
Max.tightening torque	2.5N.m
Installation	Mounting on 35mm DIN rail
Incoming method	Bi-Directional

## Tripping Sensitivity

- 30mA: This is the most commonly used protection level in homes and commercial buildings, and is suitable for socket protection in general residential environments, offices and commercial places.
- 100mA: Usually used in situations where personal protection requirements are not as strict as 30mA, or for equipment protection, such as air conditioning systems, industrial equipment, etc.
- 300mA: Mainly used for fire protection, such as distribution boards and general protection of large electrical equipment.

## RCD Type

A	Able to detect alternating current (AC) leakage current and pulsed DC leakage current. It is suitable for environments where DC leakage may occur, including places where modern electrical equipment such as inverters, UPS (uninterruptible power supply systems), and LED lighting are used.
B	Able to detect alternating current (AC), pulsed DC leakage current, and smooth DC leakage current. Type B RCDs provide the most comprehensive protection and can detect all types of leakage currents. Suitable for special applications, such as electric vehicle charging stations, photovoltaic systems, medical equipment, etc., where a large amount of DC component leakage current may be generated.

## Tripping Time

Instantaneous	Two types of leakage protectors, AC and A, are usually designed to quickly disconnect circuits ( $\leq 300\text{ms}$ ) to protect people from electric shock.
Short time delay	Designed for use in situations where rapid power outage is required to protect equipment. They have shorter trip times (10-300ms) than Type AC and Type A RCDs to minimize damage to the equipment.
Selective	Designed to allow downstream RCDs to trip before upstream RCDs, thereby achieving precise isolation of faulty sections. The S-type RCD is designed with a longer tripping time (130-500ms) to coordinate with other RCDs in the power distribution system to avoid unnecessary power outages.

## Breaking Time of Residual Current

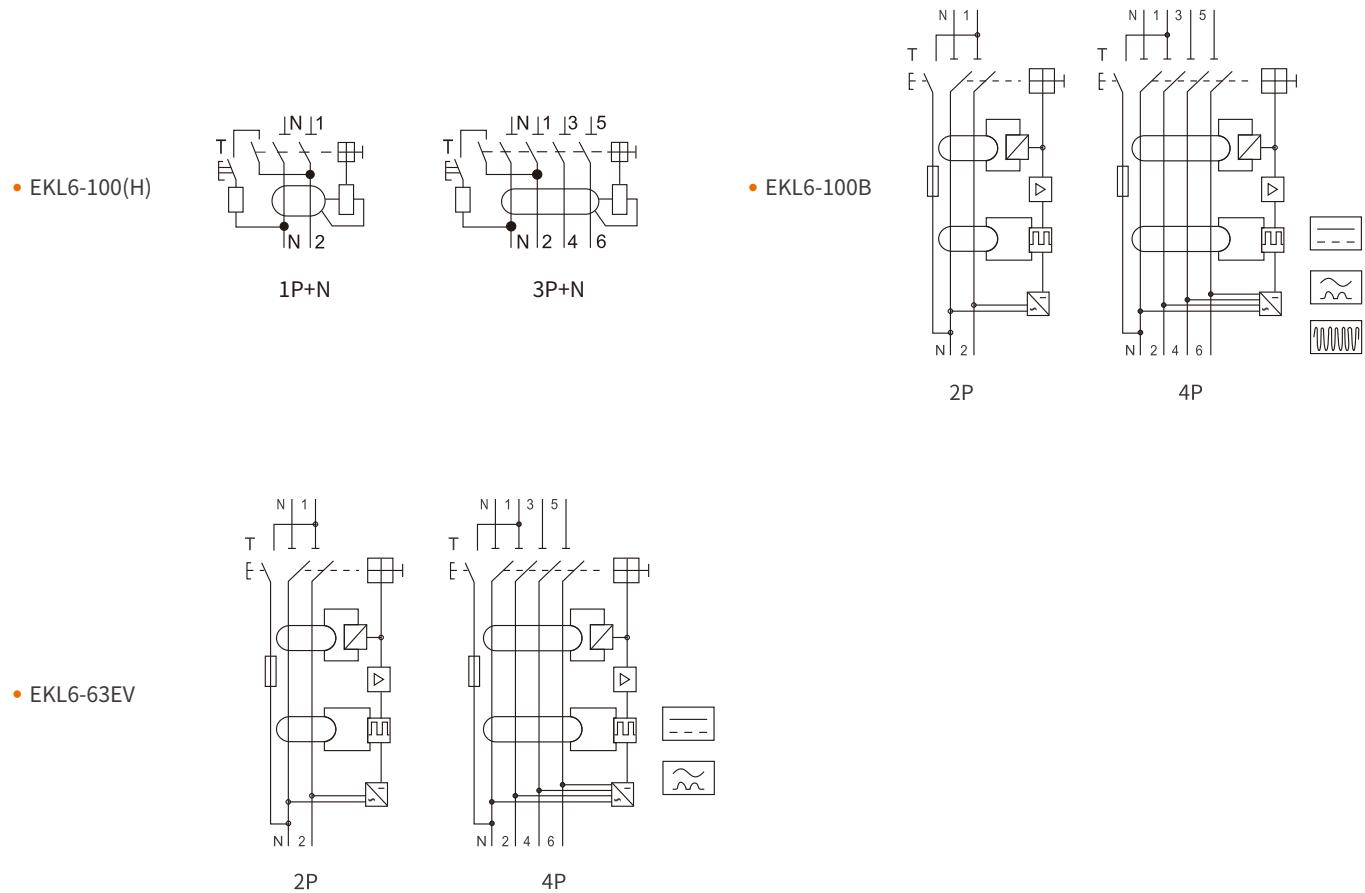

In(A)	I $\Delta$ n(A)	Max. breaking time			
		I $\Delta$ n	2I $\Delta$ n	5I $\Delta$ n	5,10,20,50,100,200,500A
16,20,25,32,40,63,80,100	0.03, 0.1, 0.3	0.1s	0.08s	0.04s	0.04s

## Wiring

The suitable conductors should be used for connection, see table below for relative parameters.

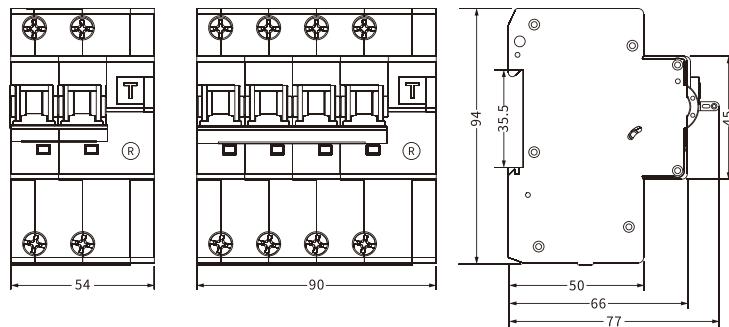

Rated current In (A)	Cross section area s (mm <sup>2</sup> )	Tightening torque (N.m)
16	2.5	2.5
20	2.5	2.5
25	4	2.5
32	6	2.5
40	10	2.5
63	16	2.5
80	25	2.5
100	35	2.5

Overall and Installation Dimension(mm)

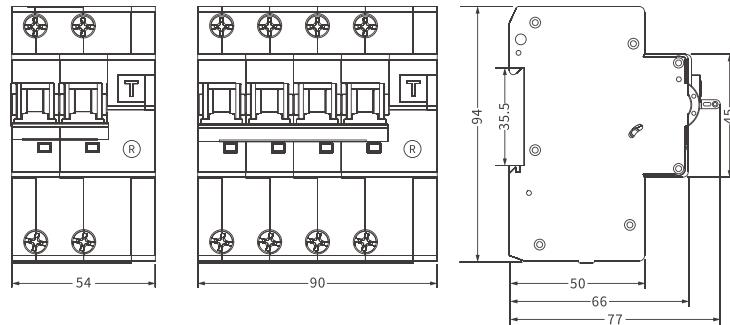

### Technical Data

Standard	IEC/EN 61009-1
Protection	Ground fault, Overcurrent and short circuit, Over-voltage(selectable)
Type of trip	Ground fault : Electronic Overload and short circuit :Thermo-magnetic
Residual current type	AC,A,S
No. of poles	1P+N 3module , 3P+N 5module (with switched neutral)
Rated voltage (Ue)	1P+N:230/240V~,3P+N:400/415V~
Rated currents (In)	6,10,16,20,25,32,40,50,63A
Rated sensitivity currents (IΔn)	10,30,100,300mA
Residual current off-time under (IΔn)	≤ 0.1s
Rated residual making and breaking capacity (IΔm)	500A( $I_n \leq 50A$ ), $10I_n(I_n > 50A)$
Rated frequency	50/60Hz
Rated short-circuit capacity (Icn)	EKL5-63: 6kA, EKL5-63H: 10kA
Energy limiting class	3
Rated impulse withstand voltage (Uimp) (1.2/50μs)	4kV
Dielectric test voltage	2kV (50/60Hz, 1 min.)
Thermal tripping characteristics	(1.13-1.45) x In
Instantaneous tripping characteristics	B:(3-5) x In, C:(5-10) x In, D:(10-20) x In
Electrical life	4,000 Cycles
Mechanical life	10,000 Cycles
Contact position indicator	green OFF / red ON
Protection degree	IP20
Ambient temperature	-25°C to +55°C, Max.95% humidity
Terminal connection type	Cable/Pin-type busbar/Fork-type busbar
Max. terminal size for cable	25mm <sup>2</sup>
Max. tightening torque	2.5N.m
Installation	Mounting on 35mm DIN rail
Incoming method	From top

## Tripping Sensitivity

- 30mA: This is the most commonly used protection level in homes and commercial buildings, and is suitable for socket protection in general residential environments, offices and commercial places.
- 100mA: Usually used in situations where personal protection requirements are not as strict as 30mA, or for equipment protection, such as air conditioning systems, industrial equipment, etc.
- 300mA: Mainly used for fire protection, such as distribution boards and general protection of large electrical equipment.

## RCD Type

A		Able to detect alternating current (AC) leakage current and pulsed DC leakage current. It is suitable for environments where DC leakage may occur, including places where modern electrical equipment such as inverters, UPS (uninterruptible power supply systems), and LED lighting are used.
B		Able to detect alternating current (AC), pulsed DC leakage current, and smooth DC leakage current. Type B RCDs provide the most comprehensive protection and can detect all types of leakage currents. Suitable for special applications, such as electric vehicle charging stations, photovoltaic systems, medical equipment, etc., where a large amount of DC component leakage current may be generated.

## Circuit Diagram

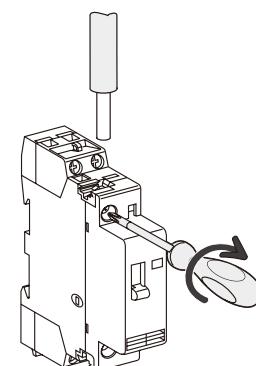

### Technical Data

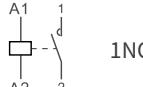

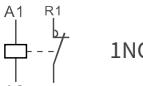

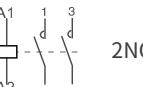

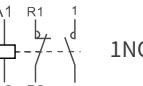

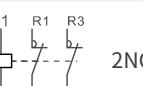

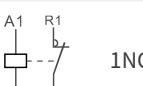

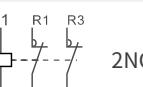

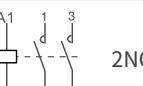

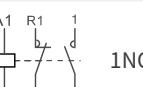

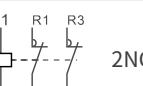

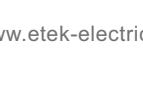

Standard	IEC61095
Poles	1P, 2P, 3P, 4P
Method of control	Automatic
Rated operational voltage Ue (V)	AC250V (1P, 2P), AC400V (3P, 4P)
Number of main contacts	1P: 1NO,1NC; 2P: 1NO+1NC, 2NO2NC 3P: 3NO, 3NC; 4P: 2NO+2NC, 3NO+1NC, 4NO, 4NC
Rated impulse withstand voltage Uimp (V)	4kV
Rated operational currents Ie (A)	16-125A (AC-7a), 6-50A (AC-7b)
Rated frequency (Hz)	50/60Hz
Utilization category	AC-7a/AC-7b
Rated control supply voltage Us	AC24V; AC110V; AC220-240V
Mechanical life (times)	$10 \times 10^6$
Electrical life (times)	$10 \times 10^5$

**Dimension(mm)**

### Technical Data

Voltage	Reference voltage	AC 230V
	Reference frequency	50Hz
	Power consumption	<10VA
Current	Reference current	0.5-10(80)A
	Consumption	<4VA
Accuracy of measuring		Class B
Range of measuring		000000.00~99999999kWh
Clock accuracy		Error≤0.5s/d
Active pulse	Pulse width	80±20ms
	Pulse constant	1000imp/kWh
Communication	Interface	RS485(A+, B-)
	Connection mode	Shielded twisted pair conductors
	Protocol	MODBUS-RTU
Max. tightening torque		<1.8Nm
Work temperature		-25°C to +55°C
Storage Temperature		-40°C to +70°C
Relative humidity		≤95%(No condensation)
Altitude		<2000m

### Dimension(mm)

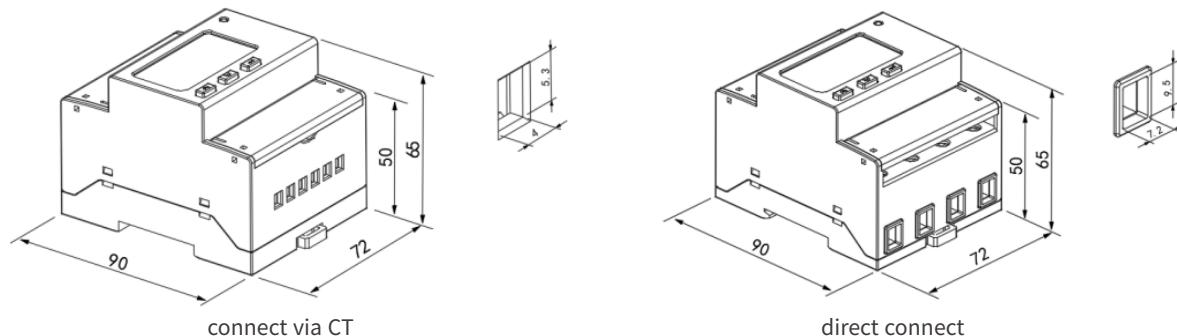

### Technical Data

Specification		3 phase 3 wires	3 phase 4 wires		
Voltage	Reference voltage	3×100V, 3×400V	3×57.7/100V, 3×230/400V		
	Voltage range	3×100V~3×450V	3×57.7/100V~3×260/450V		
	Consumption	<10VA(Single phase)			
	Impedance	>2MΩ			
	Accuracy class	Error±0.2%			
Current	Input current	0.01-1(6)A (Secondary access model) 0.5-10(80)A(Direct access model)			
	Consumption	<1VA Single phase rated current			
	Accuracy class	Error±0.2%			
Power	Active, reactive, apparent power, error±0.5%				
Frequency	45~65Hz, Error±0.2%				
Active Energy Class(kWh)	C(kWh)				
Clock	≤0.5s/d				
Energy pulse output	1 active photocoupler output				
Width of pulse	80±20ms				
Pulse constant	10000imp/kWh				
Interface and communication protocol	RS485:Modbus RTU				
Range of communication address	Modbus RTU:1~247				
Baud rate	1200bps~38400bps				
working temperature	-25°C to +55°C				
Relative humidity	≤95%(No condensation)
